

## Wi-Fi CONNECTION SETUP GUIDE – WEB BROWSER BASED METHOD

### 1. SEARCH FOR THE SKYSNAP NETWORK

Your SkySnap produces a Wi-Fi network to which you can connect. Once connected, you can then connect your SkySnap to your Wi-Fi network.

To connect to the SkySnap, you can use either a laptop computer or smartphone. Search in the available wireless networks for the SkySnap network.

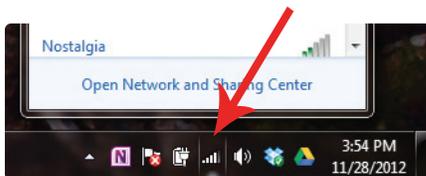

#### From a Cell Phone:

In your phone settings, select Wi-Fi to view networks.

#### From a PC:

In your system tray, select network center icon.

### 2. CONNECT TO SKYSNAP NETWORK

From the list of available Wi-Fi networks, select the network “#xxxxxx”, where your unique 6-digit alphanumeric code “xxxxxx” is the last 6 digits of your S/N. In the example below, the SkySnap network is #A69C46.

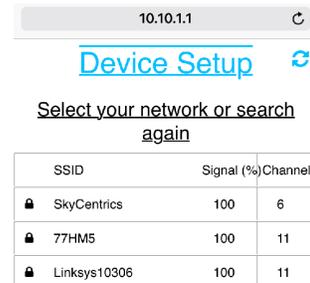

### 3. CONNECT SKYSNAP TO YOUR Wi-Fi ROUTER

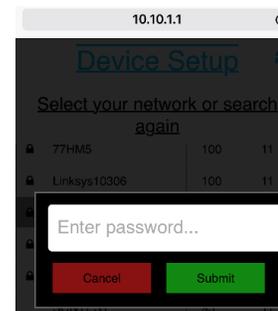

1. Open a web browser (as if going to a website). Go to “10.10.1.1” in the address bar.

2. The SkySnap will search for available Wi-Fi networks. Click on your Wi-Fi network or use refresh arrows to search again.

3. Enter your Wi-Fi network's password and then click “Submit”. Cancel to choose a different network.

4. Your device will connect to your Wi-Fi network.

Connecting to Wi-Fi network

### REGISTER ON THE WEB MANAGEMENT PORTAL

1. Go to [www.skycentrics.com](http://www.skycentrics.com), click login and create an account.
2. Click "+" and Add a Device.
3. Your SkySnap should be added as a SkySnap.
4. See detailed instructions on how to configure a type for your SkySnap.

**TROUBLESHOOTING:** If for any reason your SkySnap has failed to connect to your network, **factory reset** the SkySnap by removing the Wi-Fi dongle, and turning power off, then on. **After 1 minute** with the Wi-Fi dongle removed and the power on, turn the power off again, re-insert the Wi-Fi dongle, and turn the power on. After 40 seconds, your SkySnap will start broadcasting its #xxxxxx network.
