**Instructions for a Factory Reset and WPS on a USNAP module for thermostats**

Below is a picture of the USNAP Paperclip Removal Tool that we bend with pliers and use to grab the USNAP 'strap'. You can also use the other non-bent end to push in the factory reset button as described below.

FACTORY RESET

1. Place paper clip inside the hole shown below and press on a little white circle that you can barely see.

White Circle indents just a bit with a barely audible click!

2. Hold it down for 5 seconds until you see the green lights completely go off and you hear a beep then release (older modules beep **AFTER** you release). That is it!
